About the Program

Clinical research and development (R&D) is a critical aspect of bringing new drugs, medical devices, and therapies to market. It involves the process of testing and evaluating the safety and efficacy of new treatments in humans through clinical trials. The clinical research and development process typically involves four phases of clinical trials. Phase I trials are conducted on a small group of healthy volunteers to evaluate the safety and dosage of the treatment. Phase II trials are conducted on a larger group of patients to evaluate the treatment's effectiveness and side effects. Phase III trials involve a larger group of patients to confirm the treatment's effectiveness and monitor side effects over an extended period. Finally, Phase IV trials are post-marketing studies conducted after regulatory approval to monitor long-term safety and effectiveness. The clinical R&D process is complex and expensive, but it is critical to ensure that new treatments are safe and effective for patients.

Date- 04.10.2019

Venue - Seminar Hall

About College

Nimra College of Pharmacy a self-finance institution established by Nimra Educational Society in the year 2006 with a view of providing Pharmacy education within a modern educational environment and strong academic planning, Nimra is strongly identified with most trusted name of Pharmacy education in Costal Andhra, since its inception and foundation. NCP has constantly leaded the way in reform movements, reconstruction, modernization, and administration of the society.

The college provides students with an exceptional education because of the quality of its faculty, staff, student services, curriculum, experiential programs, and the quality of the students themselves.

Over the past years, we have made great strides in quality pharmacy education, providing unique learning opportunities for students and meeting the challenge of industry demands.

We are proud of our significant progress in meeting the goals and objectives of the college's mission to promote the health and welfare of the citizens of the nation.

There is a deep and abiding resolve on the part of all who comprise the College family to actively contribute to the full professional realization of each and every student. We believe that a true grounding as a professional requires a sense of belonging, a sense of caring, and a sense of commitment. In that regard, we are driving by a "spirit of community."

NCP is determined of preparing outstanding pharmacists and pharmaceutical scientists to meet the health care needs of the diverse populations of the state and society and enhancing the delivery of essential pharmacy services for all citizens.

Reflecting the values of education , the vision of the Nimra College of Pharmacy is to contribute to the building of a better society for all through improved health status of individuals and the community. We will accomplish this vision through devotion to our mission of increased educational opportunities to society as a whole.

The College will strive to prepare students to be competent, attentive, and ethical professionals dedicated to providing care to patients and supporting the health care team.

PROGRAM REPORT

Date:04/10/2019

Program Name : A Seminar on Clinical Research and Development
Date of activity : 04/10/2019
Venue : College Seminar Hall
Organized by : B Pharmacy
Number of Participants : 25

Objective of the program

The clinician investigator integrates all the Can Med competencies including the roles of a scholar, communicator, health advocate, manager, collaborator and professional in their roles as a medical expert to conduct ethical research, establish and maintain skills and attitudes appropriate to their research practices, using ethical and effective research methodologies to address questions.

Topic Covered

- ❖ Introduction
- ❖ Material and method
- ❖ Ethical foundation of clinical trails
- ❖ Overviews of trail design
- ❖ Overview of drug designs
- ❖ Preclinical, phase 1 , phase 2 trails
- ❖ Phase III trails
- ❖ Phase IV trails
- ❖ Conclusion

Outcome of the program:

The participants of the seminar will get the proper knowledge of **clinical Research and development**, where they can learn healthcare practices and inventions. It includes effects that people experience and care about such as change in ability to function. In particular, for individuals with chronic condition, where cure is not always possible end of the result include quality of life as well as mortality.

On **04-10-2019** from our college 25 students and 3 faculties have participated in the **CLINICAL RESEARCH AND DEVELOPMENT**.

About the Program

New drugs are continually required by the healthcare systems to address unmet medical needs across diverse therapeutic areas, and pharmaceutical industries primarily strive to deliver new drugs to the market through the complex activities of drug discovery and development. Discovery involves a number of processes like target identification and validation, hit identification, lead generation and optimization and finally the identification of a candidate for further development. Development, on the other hand, includes optimization of chemical synthesis and its formulation, toxicological studies in animals, clinical trials, and eventually regulatory approval. These issues have had an adverse bearing on the R&D productivity in recent years, hence there is a need for innovative approaches as well as increased collaboration between industry, academia, and governmental research institutions, with a common objective of constantly delivering quality medicines.

About the Program

2D-3D printing is presented as one of the tools of a more personalized medicine, the techniques of additive printing allowing the production of tabs containing several drugs in one tab (polypills) and the development of custom modified releases drugs. The additive technology or 2D and 3D printing are increasingly used in various industrial fields, from aeronautics to mechanics but also in the fields of health such as dentistry or for bone reconstructions. These techniques have been studied for about fifteen years by the academic community in the pharmaceutical field (medical device and drug), and recently they have started to be applied to produce drugs in industry and in hospitals. This approach could allow better acceptance of the finished product and secure manufacturing. The objective of this work is to highlight relevant printing technologies for implementation in hospital pharmacies, and to see how these technologies could lead to a change in pharmaceutical practices, to improve patient care.

About the Program

Adverse drug reactions (ADRs) are unintended and harmful effects of medications that can occur at therapeutic doses. They can range from mild to severe and can occur immediately or long after the medication's use. ADRs can be caused by various factors, such as drug interactions, dosage errors, or an individual's genetic makeup. Common types of ADRs include allergic reactions, drug-induced liver injury, and cardiovascular events. ADRs are a significant public health concern and can result in hospitalization, disability, or even death. The detection, monitoring, and reporting of ADRs are critical to ensure the safety of medications and protect the public's health. Healthcare providers and regulatory agencies use various systems and tools, such as the MedWatch program and the Adverse Event Reporting System, to report and monitor ADRs.
