NIMRA COLLEGE OF PHARMACY
Nimra Nagar, JUPUDI,

About the Program

Pre-clinical research is a critical stage in the development of new drugs, therapies, and medical devices. It involves laboratory and animal studies that are conducted to test the safety and efficacy of a new intervention before it is tested in humans. The main objectives of pre-clinical research are to identify potential therapeutic targets, assess the pharmacological properties of new compounds, and evaluate the safety and toxicity of the intervention. During pre-clinical research, scientists use a variety of techniques to investigate the mechanism of action of the intervention, determine its optimal dosage, and assess its potential side effects. Animal studies are a crucial part of pre-clinical research, as they provide valuable information on the safety and efficacy of the intervention in a living organism. The results of pre-clinical research are used to inform the design of clinical trials, which are conducted to evaluate the safety and efficacy of the intervention in humans. Overall, pre-clinical research plays a vital role in the development of new therapies and drugs, helping to ensure that they are safe and effective before they are tested in human clinical trials.

About College

Nimra College of Pharmacy a self-finance institution established by Nimra Educational Society in the year 2006 with a view of providing Pharmacy education within a modern educational environment and strong academic planning, Nimra is strongly identified with most trusted name of Pharmacy education in Costal Andhra, since its inception and foundation. NCP has constantly leaded the way in reform movements, reconstruction, modernization, and administration of the society.

The college provides students with an exceptional education because of the quality of its faculty, staff, student services, curriculum, experiential programs, and the quality of the students themselves.

Over the past years, we have made great strides in quality pharmacy education, providing unique learning opportunities for students and meeting the challenge of industry demands.

We are proud of our significant progress in meeting the goals and objectives of the college's mission to promote the health and welfare of the citizens of the nation.

There is a deep and abiding resolve on the part of all who comprise the College family to actively contribute to the full professional realization of each and every student. We believe that a true grounding as a professional requires a sense of belonging, a sense of caring, and a sense of commitment. In that regard, we are driving by a "spirit of community."

NCP is determined of preparing outstanding pharmacists and pharmaceutical scientists to meet the health care needs of the diverse populations of the state and society and enhancing the delivery of essential pharmacy services for all citizens.

Reflecting the values of education , the vision of the Nimra College of Pharmacy is to contribute to the building of a better society for all through improved health status of individuals and the community. We will accomplish this vision through devotion to our mission of increased educational opportunities to society as a whole.

The College will strive to prepare students to be competent, attentive, and ethical professionals dedicated to providing care to patients and supporting the health care team.

Courses Offered By Nimra College of Pharmacy

Bachelor of Pharmacy (B.Pharm)

Master of Pharmacy (M.Pharm)

Pharmaceutical Analysis

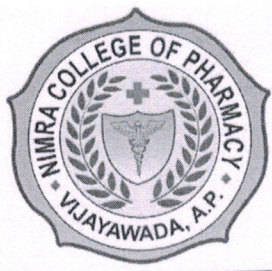

Pharmaceutics

Pharm.D

Syllabus

- ◆ API preparations
- ◆ Formulation studies
- ◆ Safety studies
- ◆ PK/ADME studies
- ◆ Analytical Chemistry
- ◆ Quality Assurance
- ◆ Toxicology
- ◆ Stability and Degradation studies
- ◆ Development and Validation
- Nanoparticle
- ◆ Clinical Trial
- ◆ Antidepressant
- ◆ Neoplasm
- ◆ Malignant Neoplasm

About the Program

Intellectual Property Rights (IPR) are legal rights that protect the creations of the human mind. They include patents, trademarks, copyrights, and trade secrets. Patents protect inventions and grant exclusive rights to the inventor for a limited period, typically 20 years from the filing date. Trademarks protect the branding and logos of companies, while copyrights protect original works of authorship, such as books, music, and software. Trade secrets protect confidential and proprietary information, such as formulas, designs, and processes. IPR plays a crucial role in promoting innovation and economic growth by providing incentives for individuals and companies to invest in research and development. They also ensure that creators and inventors can benefit from their creations and prevent others from profiting from their work without permission. Companies and individuals can license or sell their IPR to generate revenue and create new business opportunities.

Date: 26-06-2018.

Program Name : A Seminar on Intellectual Property Right
Date of Activity :- 26-06-2018.
Venue :- College Seminar Hall
Organized by :- B. Pharmacy
Number of Participant :- 25

Objective of the program:

IPRs are considered as a barometer R&D activities, encourages technology transfer, national / foreign direct investments & help in technological / industrial development . From last many years it was observed that filing IP application in the country are not increasing at higher rate despite significant contribution towards R&D by various institutes, Scientist and R&D organizations, teachers , student etc

Topic Covered

- ❖ Intellectual Property Patents
- ❖ Applying for a Patent
- ❖ Patentability Requirement
- ❖ Patent Licensing
- ❖ Choosing between Licensing and Manufacturing an Invention
- ❖ Type of Patents
- ❖ Protecting an Invention before getting a Patent
- ❖ Working with a Patent Lawyer
- ❖ Filing for a Patent without a Lawyer
- ❖ Patent Form

About the Program

Intellectual property (IP) is a set of legal rights that protect creative works, inventions, and other forms of innovation from unauthorized use, reproduction, or distribution. Patents are a type of IP that specifically protect inventions and new discoveries, granting the inventor exclusive rights to manufacture, use, and sell the invention for a limited period. The purpose of patents is to encourage innovation by providing inventors with a temporary monopoly over their invention, allowing them to recoup their investment in research and development and earn a profit. To obtain a patent, an invention must meet certain criteria, including novelty, non-obviousness, and usefulness. Once granted, the patent owner has the exclusive right to use, sell, and license the invention, and can take legal action against anyone who infringes on their patent rights. Patents can be a valuable asset for individuals and organizations, providing them with a competitive advantage and the ability to generate revenue through licensing or selling their inventions. However, patent protection is a complex area of law that requires careful consideration of the costs and benefits of pursuing patent protection, as well as the potential risks of infringing on the patents of others.

PROGRAM REPORT

Date: 17-07-2018.

Program Name : A Seminar on Intellectual Property on patents
Date of activity : 17-07-2018.
Venue : College Seminar Hall
Organized by : B Pharmacy
Number of Participants : 25

Objective of the program:

Objectives of intellectual property refer to the purposes of protection granted to creators of innovative intellectual creations. Intellectual property (IP) rights serve the important purpose of ensuring that creators will be recognized for their efforts and protected from infringement. When they are sure that their works are protected, creators are more likely to come up with more new creations. As such, IP also helps to promote creativity and innovation. There are many different forms of IP, each of which is protected by a certain type of IP rights

Topics Covered :

- ❖ Intellectual property
- ❖ Patents
- ❖ Applying for a patent
- ❖ Patentability requirements
- ❖ Non-Obviousness requirement for patents
- ❖ Utility Requirement for patents
- ❖ Prior Art Leading to denials of patents Applications
- ❖ Provisional patent application
- ❖ Time Limits in Patent Infringement Cases

About the Program

Copyright is a form of Intellectual Property Rights (IPR) that protects original works of authorship, such as books, music, movies, and software. It grants exclusive rights to the copyright owner to reproduce, distribute, and display the work and create derivative works based on the original work. Copyright protection is automatic, and the copyright owner has the right to sue for infringement if someone else uses their work without permission. In most countries, copyright protection lasts for the lifetime of the author plus a certain number of years after their death. Copyright is essential for creators and artists to protect their work and benefit from their creations. It encourages innovation and creativity by providing incentives for individuals to create new works and allowing them to profit from their creations. It also benefits society as a whole by promoting the dissemination of knowledge and culture.

About the Program

Describe the role of computer-aided design in project development. Rapid prototyping and list four rapid prototyping technologies. The role of design in manufacture, assembly, disassembly, and service. Modeling for assembly. Toward the design of new antibiotics, computer-aided drug design (CADD) can be combined with wet-lab techniques to elucidate the mechanism of drug resistance, to search for new antibiotic targets and to design novel antibiotics for both known and new targets. CADD methods are mathematical tools to manipulate and quantify the properties of potential drug candidates as implemented in a number of programs. These include a range of publicly and commercially available software packages.

About the Program

The research and development (R&D) process is a critical aspect of innovation and growth for companies and organizations. It involves various stages, including idea generation, research, and development. In the idea generation stage, potential areas for innovation are identified, and new products or services are considered. Research is then conducted to gather information and data to determine the feasibility and potential of the idea. The development stage involves designing, engineering, testing, and refining the product or process to meet desired specifications and standards. Through the R&D process, companies and organizations can stay ahead of the competition, improve their products or services, and meet the changing needs and demands of their customers.

About College

Nimra College of Pharmacy a self-finance institution established by Nimra Educational Society in the year 2006 with a view of providing Pharmacy education within a modern educational environment and strong academic planning, Nimra is strongly identified with most trusted name of Pharmacy education in Costal Andhra, since its inception and foundation. NCP has constantly led the way in reform movements, reconstruction, modernization, and administration of the society.

The college provides students with an exceptional education because of the quality of its faculty, staff, student services, curriculum, experiential programs, and the quality of the students themselves.

Over the past years, we have made great strides in quality pharmacy education, providing unique learning opportunities for students and meeting the challenge of industry demands.

We are proud of our significant progress in meeting the goals and objectives of the college's mission to promote the health and welfare of the citizens of the nation.

There is a deep and abiding resolve on the part of all who comprise the College family to actively contribute to the full professional realization of each and every student. We believe that a true grounding as a professional requires a sense of belonging, a sense of caring, and a sense of commitment. In that regard, we are driving by a "spirit of community."

NCP is determined of preparing outstanding pharmacists and pharmaceutical scientists to meet the health care needs of the diverse populations of the state and society and enhancing the delivery of essential pharmacy services for all citizens.

Reflecting the values of education, the vision of the Nimra College of Pharmacy is to contribute to the building of a better society for all through improved health status of individuals and the community. We will accomplish this vision through devotion to our mission of increased educational opportunities to society as a whole.

The College will strive to prepare students to be competent, attentive, and ethical professionals dedicated to providing care to patients and supporting the health care team.
